## **Technical and Bibliographic Notes / Notes techniques et bibliographiques**

The Institute has attempted to obtain the best original copy available for filming. Features of this copy which may be bibliographically unique, which may alter any of the images in the reproduction, or which may significantly change the usual method of filming are checked below.

- Coloured covers /  
Couverture de couleur
  - Covers damaged /  
Couverture endommagée
  - Covers restored and/or laminated /  
Couverture restaurée et/ou pelliculée
  - Cover title missing / Le titre de couverture manque
  - Coloured maps / Cartes géographiques en couleur
  - Coloured ink (i.e. other than blue or black) /  
Encre de couleur (i.e. autre que bleue ou noire)
  - Coloured plates and/or illustrations /  
Planches et/ou Illustrations en couleur
  - Bound with other material /  
Relié avec d'autres documents
  - Only edition available /  
Seule édition disponible
  - Tight binding may cause shadows or distortion along  
Interior margin / La reliure serrée peut causer de  
l'ombre ou de la distorsion le long de la marge  
Intérieure.
  - Blank leaves added during restorations may appear  
within the text. Whenever possible, these have been  
omitted from filming / Il se peut que certaines pages  
blanches ajoutées lors d'une restauration  
apparaissent dans le texte, mais, lorsque cela était  
possible, ces pages n'ont pas été filmées.
  - Additional comments /  
Commentaires supplémentaires:

L'institut a microfilmé le meilleur exemplaire qu'il lui a été possible de se procurer. Les détails de cet exemplaire qui sont peut-être uniques du point de vue bibliographique, qui peuvent modifier une image reproduite, ou qui peuvent exiger une modification dans la méthode normale de filmage sont indiqués ci-dessous.

- Coloured pages / Pages de couleur
  - Pages damaged / Pages endommagées
  - Pages restored and/or laminated /  
Pages restaurées et/ou pelliculées
  - Pages discoloured, stained or foxed /  
Pages décolorées, tachetées ou piquées
  - Pages detached / Pages détachées
  - Showthrough / Transparence
  - Quality of print varies /  
Qualité Inégale de l'Impression
  - Includes supplementary material /  
Comprend du matériel supplémentaire
  - Pages wholly or partially obscured by errata slips,  
tissues, etc., have been refilmed to ensure the best  
possible Image / Les pages totalement ou  
partiellement obscurcies par un feuillet d'errata, une  
pelure, etc., ont été filmées à nouveau de façon à  
obtenir la meilleure image possible.
  - Opposing pages with varying colouration or  
discolourations are filmed twice to ensure the best  
possible Image / Les pages s'opposant ayant des  
colorations variables ou des décolorations sont  
filmées deux fois afin d'obtenir la meilleure image  
possible.

**This item is filmed at the reduction ratio checked below /  
Ce document est filmé au taux de réduction indiqué ci-dessous.**

A horizontal scale with numerical labels above and below. The top row has labels: 10x, 14x, 18x, 22x, 26x, and 30x. The bottom row has labels: 12x, 16x, 20x, 24x, 28x, and 32x. There are six empty square boxes above each label. A checkmark is placed in the box under the 24x label.

The copy filmed here has been reproduced thanks  
to the generosity of:

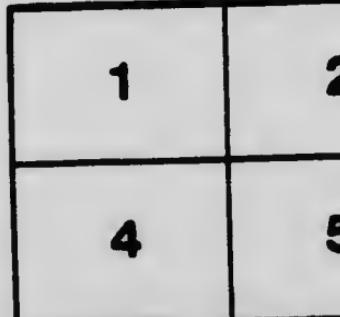

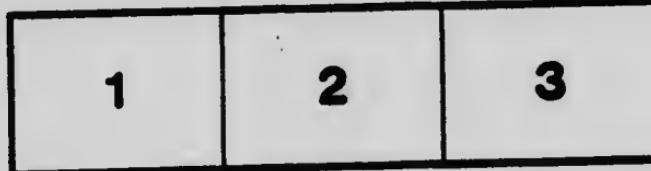

National Library of Canada

The images appearing here are the best quality  
possible considering the condition and legibility  
of the original copy and in keeping with the  
filming contract specifications.

Original copies in printed paper covers are filmed  
beginning with the front cover and ending on  
the last page with a printed or illustrated impres-  
sion, or the back cover when appropriate. All  
other original copies are filmed beginning on the  
first page with a printed or illustrated impres-  
sion, and ending on the last page with a printed  
or illustrated impression.

The last recorded frame on each microfiche  
shall contain the symbol → (meaning "CON-  
TINUED"), or the symbol ▽ (meaning "END"),  
whichever applies.

Maps, plates, charts, etc., may be filmed at  
different reduction ratios. Those too large to be  
entirely included in one exposure are filmed  
beginning in the upper left hand corner, left to  
right and top to bottom, as many frames as  
required. The following diagrams illustrate the  
method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

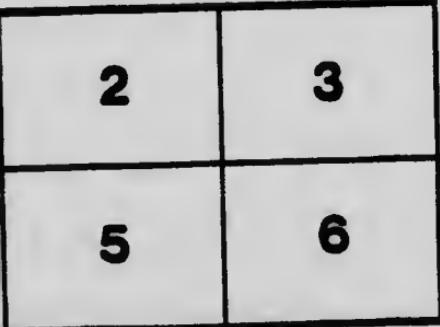

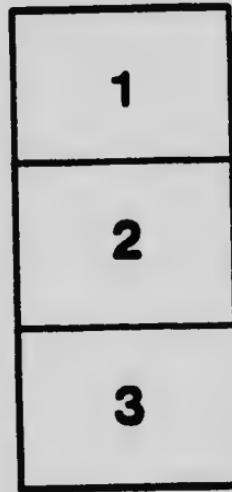

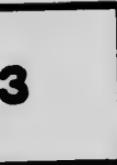

Bibliothèque nationale du Canada

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole → signifie "A SUIVRE", le symbole ▽ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

## TOBACCO CULTURE IN CANADA

The growing of tobacco in Canada is a comparatively recent industry which has considerably expanded since a duty has been placed on all foreign leaf imported into this country.

The chief tobacco-growing districts in Canada are located as follows: In southern Ontario, the counties of Essex, Kent, Elgin, and recently Norfolk, with a few scattered crops in the Niagara peninsula (counties of Haldimand, Welland and Lincoln). In Quebec the counties of Joliette, Montcalm, L'Assomption, Rouville, Berthier, Two Mountains, with a tendency to invade the county of St. Hyacinthe and part of the Eastern Townships.

Climatic conditions have specialized to a great extent the types of tobacco produced in the various districts, for instance, the Ontario counties produce plug tobacco of the White Burley type and smoking tobacco (for pipe use) of rather heavy texture (Kentucky types, large Seed Leaf, etc.), as well as some bright tobacco of the Virginia type. All require a comparatively long season found only in that part of Canada.

The northern counties of Quebec supply cigar tobacco (binders and fillers) and pipe tobacco, while the southern counties (Yamaska valley) produce a cigar leaf of a somewhat finer texture, as a rule of better size than that from the northern counties and yielding a higher percentage of binders.

The varieties of tobacco grown in the above-mentioned districts can be described as follows:—

*Southern Ontario.*—White Burleys, Large Connecticuts, Snuff tobacco fire-cured, Bright tobacco flue-cured, also a small proportion of Zimmer Spanish and Havana Seed Leaf.

*Quebec (Northern counties).*—Comstock Spanish, Havana Seed Leaf, Connecticuts, General Grant, Blue Pryor, Canelle, Small Havana, etc.

*Quebec (Southern counties).*—Comstock Spanish, Havana Seed Leaf, and Connecticut Seed Leaf.

There is an increasing demand in Canada for Ontario flue-cured tobacco of the best grade of really bright colour. However, the acreage of land adapted to the growing of that type of tobacco seems to be limited to parts of the northern shore of lake Erie. Tobacco growers desiring to specialize in the production of flue-cured tobacco in Canada must be very careful not to utilize for this purpose land too heavy in texture or too fertile, which generally gives a rank growth and yields a tobacco very hard to cure the right colour.

The production of White Burley in Canada, at present at least, seems to have reached the limit of the home consumption for that type of tobacco. It is claimed that if the quality of the leaf could be improved, more of it could be used by the Canadians.

manufacturers, therefore our attention should be devoted more to producing a higher grade of leaf than to increasing the acreage too rapidly.

As regards the cigar tobaccos of the Quebec districts, there is a good demand from the home trade especially for binder leaf, and the demand for Quebec cigar fillers is also increasing. However, it can be said that Quebec has grown in 1919, and more especially in 1920, more tobacco than the Canadian trade can absorb annually. A certain quantity of Quebec cigar leaf could be exported to England, but the demand from that source would be limited to the comparatively small size of the domestic cigar industry in England. The British demand for cigar tobacco of both the binder and filler types, Canadian grown, may likely be rapidly satisfied, and it is better not to depend too much on the demand for cigar tobacco from the other side. In Quebec also it can be said that, as far at least as cigar tobaccos are concerned, more attention should be devoted to the improvement of the quality than to the extension of the acreage.

There is a large demand for pipe tobacco (Quebec grown) from the raw leaf trade. However, this demand is certainly more than satisfied by a crop as large as that of 1920, and as there is no outlet for that tobacco outside of Canada, it is better to consider at once what steps can be taken in order to avoid an overproduction which might reflect on the price and cause serious loss to the tobacco growers.

The Tobacco Division will furnish the tobacco growers on application all information in connection with the growing of the varieties of tobacco above referred to, such as growing seedlings, transplanting, cultivating the tobacco plant, harvesting, curing, etc.

Bulletins dealing with the various phases of tobacco culture in Canada can be obtained free on application to the Tobacco Division, Experimental Farm, Ottawa, or the Publications Branch, Department of Agriculture, Ottawa.

In special cases further information will be supplied by correspondence.

A large amount of selected tobacco seed is distributed free to the tobacco growers every winter. The samples of seed distributed are accompanied by a special note mentioning the distances at which one should plant, the suitable soils, how to top, for what purpose the leaf might be used, etc.
